PROFILE

Java Backend Developer with 3.9 years of experience building scalable **microservices-based applications** using **Java** and **Spring Boot**. Strong expertise in developing **100+ RESTful APIs**, contributing to **ground-up backend development**, and delivering reliable solutions for **healthcare systems**. Experienced in **Microservices**, **MySQL**, and integration with **SOAP/REST services**, with working knowledge of **AWS** and **Docker** and basic exposure to **Kubernetes**, and **CI/CD using Jenkins**. Proven ability to write **production-grade backend systems**.

WORK EXPERIENCE

expEDlum by iTech Workshop Pvt Ltd, Software Engineer

05/2022 – Present

Product based company in U.S. Healthcare domain

- **Project:** expEDlum Patient Connect(EPC), expEDlum Office EHR(eoEHR) and expEDlum Medical Billing(eMB).
- Currently working on **expEDlum Patient Connect (EPC)** from scratch, involved in **requirement analysis, REST API design, REST API development, and integration with existing EHR microservices**. Also worked on **Spring Security implementation including Authentication and Authorization**, and containerization using **Docker**.
- Designed and developed **100+ RESTful APIs using Java and Spring Boot for expEDlum EHR**, contributing to **backend architecture, microservices development**, and key functional modules. Contributed extensively by writing **30,000+ lines of production-level code** across core backend modules.
- Enhanced search and data retrieval performance by **optimizing SQL queries** and integrating **custom filtering mechanisms** in a high-traffic production system.
- Integrated and consumed **SOAP Web Services from external vendors**, handling **request/response transformation, exception handling, and performance optimization**.
- Developed features involving **job scheduling and asynchronous processing using cron jobs and queues** for patient synchronization and medical billing workflows.
- Worked extensively on **application enhancements, performance tuning, and bug fixes**, including resolution of **critical production and security issues** across EHR and billing services.
- Maintained high code quality through **peer code reviews**, adherence to **clean code principles**, and **static analysis using SonarQube**.
- Managed **code integration and deployments across test and production environments** using version control systems.
- Mentored **junior developers and trainees**, tracked progress, and provided **technical guidance and code-level support**.
- Collaborated closely with **Product Owner, Business Analysts (BA), QA, and PSE teams** to analyze requirements, resolve functional gaps, and ensure **smooth and timely delivery across the SDLC**.

SKILLS

Languages & OS: Java(8 and 17), SQL, Windows, Linux

Frameworks & Technologies: Spring Boot, Microservices, RESTful APIs, JPA, JWT, SOAP Web Services

Databases & Cache: MySQL, PostgreSQL, Redis

Messaging & Streaming: JMS(Apache ActiveMQ Artemis), Apache Kafka(Basic)

Cloud Platforms: Amazon Web Services (EC2, IAM, RDS, S3, EFS, Route53, VPC, Lambda)

Containerization & DevOps: Docker, Kubernetes (Basic), CI/CD (Basic), Maven, Gradle, SonarQube

Version Control: Git (GitHub)

API Documentation & Testing: Swagger, Postman

Development Tools & IDEs: Eclipse, Spring Tool Suite (STS)

Project Management & Bug Tracking: Jira, Bugzilla

EDUCATION

B.E. in Electronics & Communication Engineering,

08/2016 – 08/2020

Bangalore Institute of Technology (B.I.T)

Graduated with 8.5 CGPA

PROJECTS

expEDlum Office EHR (eOEHR), - eOEHR helps health providers and partners to manage EHR.

- Working on Backend development.
- Tech Stack: Java 17, Spring Boot, Redis, Lombok, JWT, Spring Data JPA, PostgreSQL, Swagger, Multi-tenant architecture, Maven, Wildfly etc.

expEDlum Medical Billing (eMB), - eMB is an advanced secure cloud based medical billing & practice management software, Claim processing and Revenue cycle management services to health providers and partners.

- Tech Stack: HTML, CSS, Bootstrap, JS, jQuery, Ajax, JSP, Java 8, J2ee, Spring Boot, Spring Security, Rest API, Web API, PostgreSQL, Git & GitLab, SonarQube etc.

User Management System (WEB), -This project helps the admin to manage user's details, After successful login admin can perform CRUD operations, search by filters and change password.

- Tech Stack: HTML, CSS, Bootstrap, JavaScript, jQuery, Ajax, JSP, Java, J2EE, PostgreSQL, Wildfly.
